Find your soil MRV procedure adapted to your context

Monitoring Reporting and Verification (MRV) procedures give guidelines to assess the action of an activity, in a robust and transparent soil parameters. Within the scientific project BENCHMARKS, we reviewed all the existing MRV procedures including soil parameters in the scientific article *Title and URL link to add*. This interactive application allows you to navigate in our list of MRV procedures and to select those that are the most adapted to your context. The MRV procedures are presented as cards, including all the information we found.

More info about our data collection methodology : *Title of the scientific article and URL link to add*

Let's start

Example of MRV card

Labels and descriptions:

- Type of soil parameters included in the MRV procedure
- Type of data used for monitoring soil parameters
- Time range between two soil monitoring sessions required for the MRV. A methodology standard is required
- Type of landuse and landcover where the MRV procedure is applied
- Type of landuse and landcover where the MRV procedure is applied
- Targeted stakeholders
- Targeted stakeholders
- Action that we want to highlight the effect on soil characteristics.
- Final product gathering the results
- Statistical methodology used to compute the uncertainty of the results
- Methodology used to compute the threshold values.
- Methodology used to verify the results.
- If the person in charge is part of the structure implementing the MRV procedure
- If the verification is handled manually or automatized
- If the produced data is accessible by external users
- Country.ies were the MRV procedure was applied (implemented) or developed (project)
- Website or article title with its URL link
- Our article title with its URL link
